

SOHAIL AZEEM

DATA ANALYSTS / POWER BI DEVELOPERS

 0301-1103903  0311-2789239  yasohail@gmail.com

 R 610 Block 19 Al Noor society F.B. Area, Karachi Pakistan.

Results-driven Power BI Developer with **9+ years** of experience designing analytical reports and business intelligence solutions using enterprise data. Skilled in transforming raw data into actionable insights through data modeling, ETL processes, and interactive dashboard development. Experienced in developing BI and analytics solutions using Power BI, SQL Server, Oracle Database, SAP, and Microsoft Office. Resourceful, organized, and dependable problem solver with a strong ability to deliver measurable business results and support organizational growth.

Core Skills:

- Power BI
- Microsoft Office
- SQL Server
- Oracle Database
- Power Query
- DAX
- ETL Processes
- Data Modeling
- Row-Level Security (RLS)
- Dashboard Development

Professional Experience

Dewan Cement Limited

Deputy Manager – IT Department

Head Office, Karachi | Feb 2024 – Present

- Connected Power BI Desktop with Oracle Database using Get Data functionality.
- Performed ETL processes by selecting department-related dimensions and metrics through Navigator.
- Cleaned, transformed, and structured raw data using Power Query for effective analysis and reporting.
- Merged and aggregated data from multiple sheets and tables within Power Query Editor.
- Developed DAX measures and calculations including On-Date, Month-to-Date (MTD), Year-to-Date (YTD), USERRELATIONSHIP, LOOKUPVALUE, SELECTEDVALUE, REMOVEFILTERS, and other analytical functions.
- Designed and implemented data models using Star Schema and Snowflake Schema methodologies.
- Created dynamic visualizations including waterfall charts, bar charts, pie charts, cards, balance charts, and line charts to monitor performance and trends.
- Developed interactive dashboards for daily dispatches, collections, receivables, stock monitoring, energy consumption, coal tracking, and production analysis.
- Published reports and dashboards to Power BI Service workspaces for organizational access and collaboration.
- Managed application updates and shared interactive dashboards with internal teams and upper management to support strategic decision-making.
- Implemented Row-Level Security (RLS) using USERPRINCIPALNAME across 31 different power plants for secure managerial reporting.
- Configured Drill-through functionality with navigation buttons for detailed plant and manager-level analysis.
- Automated report refresh schedules up to eight times daily for production, dispatch, and collection reports.
- Managed user roles and permissions in Power BI Service to ensure secure report sharing and collaboration.
- Configured relationships between tables using Many-to-One and One-to-Many relationships for optimized filtering and reporting.
- Designed custom Power BI themes using JSON files and background images for enhanced report presentation.
- Coordinated with company plants to verify the accuracy and completeness of data entered into the Oracle Database.
- Install the on premises gateway (standard) in order to publish the dashboard on web
- Install the oracle instant client and set the system variable PATH so that TNS obtained the details from respective server IIP.

K-Electric

Assistant Manager – Key Accounts & Net Metering Department

Elander Road, Karachi | Aug 2022 – Jan 2024

- Retrieved SAP data related to daily industrial customer collections and billing operations.
- Evaluated electrical systems based on connected and sanctioned electrical loads.
- Identified customers with partial payments and non-payment issues for recovery and monitoring purposes.
- Connected Power BI Desktop with SAP HANA Database using Get Data functionality.
- Performed ETL processes by selecting department-specific dimensions and metrics through Navigator.
- Cleaned, transformed, and organized raw data using Power Query for reporting and analytical purposes.
- Developed Power BI dashboards and reports including team visit plans, KPI scorecards, tariff conversion to net metering, daily customer recovery reports, and geographic mapping dashboards using latitude and longitude coordinates.
- Designed interactive visualizations including cards, bar charts, waterfall charts, line charts, pie charts, and geographic maps for performance and trend analysis.
- Published Power BI reports to dedicated workspaces and maintained report accessibility for internal teams.
- Updated and distributed Power BI Service applications for management reporting and strategic decision-making.
- Created DAX measures to calculate current month sales units, same month previous year comparisons, and year-to-date (YTD) metrics.
- Implemented Row-Level Security (RLS) using USERPRINCIPALNAME for managerial reports across 31 power stations.
- Utilized Drill-through functionality to provide detailed information regarding specific power plants and management.
- Automated report refresh schedules up to four times daily for customer payment monitoring reports.
- Managed user access and permissions by assigning workspace roles and sharing reports with relevant stakeholders.
- Applied Star Schema modeling techniques and activated relationships for monthly, quarterly, and yearly reporting analysis.
- Prepared work orders and reservations in SAP for net metering meter allocation and assignments.
- Used SAP T-Codes to retrieve billing ledger, customer records, and other operational data.
- Retrieved feeder-related operational data from Qlik Sense including feeder names, DTS IDs, and feeder IDs.

Zong CMPak Ltd.

Power BI Developer & Data Analyst – PMO Department

Regional Office Karachi | Dec 2015 – Apr 2022

- Connected Power BI Desktop with SQL Server Database by configuring SQL Server Management Studio server connections.
- Retrieved and analyzed daily outage data related to BTS, NodeB, and ENodeB telecom technologies.
- Cleaned, transformed, and structured telecom operational data using Power Query for reporting and analysis.
- Developed interactive Power BI dashboards and reports to monitor daily, weekly, and monthly outages for South Region on-air towers.
- Published Power BI reports to designated workspaces and maintained report accessibility for management teams.
- Updated and managed Power BI Service applications to distribute interactive reports for operational decision-making.
- Combined datasets from multiple telecom technologies into unified tables using join functions and data modeling techniques.
- Developed DAX calculations in Power Pivot to automate daily power consumption analysis based on site load data.
- Applied custom JSON themes and background designs to enhance dashboard presentation and user experience.
- Implemented Star Schema data modeling and configured active relationships between fact and dimension tables.
- Configured slicers and filters for weekly, monthly, yearly, and technology-based outage analysis.
- Created visualizations including cards, line charts, bar charts, and pie charts to represent KPIs, monthly trends, team lead performance, and project budget contributions.
- Configured scheduled dataset refreshes up to eight times daily for automated reporting updates.
- Developed Power BI reports for Preventive Maintenance (PM) and Corrective Maintenance (CM) activities across Team Lead clusters.
- Managed user access control and supported web application deployment for secure report sharing and visibility.
- Retrieved PM and CM operational datasets from different environments and transformed them using Power Query Editor.

Powertech Engineering Solutions

Data Analyst – PMO Department

Main Office Karachi | Jun 2012 – Jun 2015

- Designed, developed, and implemented ETL processes to extract data from multiple source systems, transform data according to business requirements, and load it into the data warehouse.
- Troubleshoot automated system issues and resolved user-related problems concerning data population and reporting.
- Performed data reconciliation and validation across multiple data sources to ensure consistency and reliability.
- Implemented data quality checks and validation procedures to maintain data accuracy, completeness, and integrity.
- Integrated data from external systems through APIs and webhooks to ensure seamless data synchronization and workflow automation.
- Collaborated with cross-functional teams to design and develop scalable data warehouse solutions for large-scale data storage and analytics.
- Created and maintained data models, schemas, and database structures to support reporting and business intelligence requirements.
- Utilized Azure SQL, Synapse Analytics, and Azure Data Factory for data storage, management, and ETL orchestration.
- Monitored and optimized ETL workflows and data warehouse performance to improve processing efficiency and reporting speed.
- Maintained detailed documentation of ETL processes, data lineage, and data models to support governance and compliance initiatives.
- Investigated and resolved data-related issues to minimize disruptions in operational reporting and analytics.
- Developed ETL solutions using Azure Data Factory for efficient data extraction, transformation, and loading processes.

EDUCATION

1996 – 2010

- BSC (Process Engineering) Hochschule Bremerhaven, Bremerhaven, Germany.
- ZDaF (German language course) Goethe Institute Karachi.
- HSC (Pre-Engineering) Govt. Degree Science College Gulshan-e-Iqbal, Karachi.
- SSC (Science) Happy Home Secondary School, Karachi.
