

Bugs/Inconsistencies

Overall Layout

When the side bar containing all the tabs is closed, the rest of the content should spread or change to take up the now available space.

“Dashboard” Tab (Personal)

- The Department and designation card shows incorrect data when compared to corresponding data in “Profile” tab () (eg. department card shows the depID, whereas the depName would be more preferable)

“Apply Leave” Tab

- No leave type options seen in Leave Application Form.

"Attendance" Tab

- Over Time (OT) field/column not shown in Attendance Records (even though is it present in the exported pdf and csv)
- Status field/column is incorrectly set to “Present” in all the cases in Attendance Records.

“Profile” Tab

- A lot of information is missing, essentially all the information that is visible and editable by the Admin of the company should also be visible to the employee himself.
-

“HRMS” Tab

Employees tab

- Currently **all** employees' details are fetched, and then displayed directly on the browser, which is not scalable when the no. of employees increases to 1000+ (eg. for Admin of multiple branches, etc). So pagination or lazy scroll should be used instead.
- Currently, to fully view the options for the Actions “Employee Directory” table, we need to scroll down to the bottom of the table to horizontally scroll to see all the options, which is infeasible if the table is too large. One solution is to resize col width to prevent horizontal scrolling, etc.

“Edit Employee” Action

- Remove incorrect options (eg. “1”, “11”, “5”, etc) from the “Religion” drop down box in Personal Information section
- Fill in the drop down for Blood Group with valid options (currently there are no options, actually nmv, we have to first add blood group from the HRMS’ Employee section, but this should be made clear), also remove the weird “+” button beside it.
- Similarly, remove the weird “+” button beside “Department” dropdown in “Employment Information” section
- The HRMS’ setting tab defines a “Shift” and employees should be assigned these shifts (based on some validation criteria obviously) but currently Employees are not being assigned shifts that are defined in HRMS (at least not from here)
- Other consistency checks within the options so ensure they make sense and are possible.

“Report” Action

- There is no check to ensure the “To date” >= “From date” in the filtering of a particular employee’s attendance.

“ID-Card” Action

- This is redundant and should be removed, as a separate “ID-Card” exists.

“Location” Action

- This is redundant and serves no proper purpose, as it just redirects to the “Location” tab where locations of all (location tracking enabled) employees are seen, irrespective of which employees’ location button you press. One remedy is to remove it as it appears on even those employees who do not have location tracking enabled.

Attendance tab

- The no. of employees shown in “Summary” tab (28) and in “Daily” tab (118), for “Today” are significantly different as some eg. ZOHAIB HASSAN, etc do not appear in “Daily” tab
- “Daily” tab’s calculation of attendance details is very weird, If I set the time duration 1 week (1/06/2026 - 7/06/2026) I believe I should see 7 entries/records for each employee, but I get this:

Attendance Summary Daily Details

Today
This Week
This Month
Pay Cycle (26-25)

3 rows

Location tab

- The edit button in “Locations Master” table creates the edit form at the top of the table, which is inconvenient when we need to update the lower records in a large “Location Master” table due to scrolling. A better approach could be to render the edit form as a dialogue screen with a darkened background.
 - Also the edit form does not work correctly and gives the error

Edit — 5

Setup tab

- “Setup — Master Tables” is written in black which is illegible on the dark blue background.
- “Filter by grade:” ‘s dropdown text in the field is of black colour which is not visible due to the dark blue background.
- Moreover when the sections change colour due to them being clicked, then their inner lower text becomes hard to read, needs fixing.
- Similarly the text in the “Branding” section is also not illegible due to the same reason

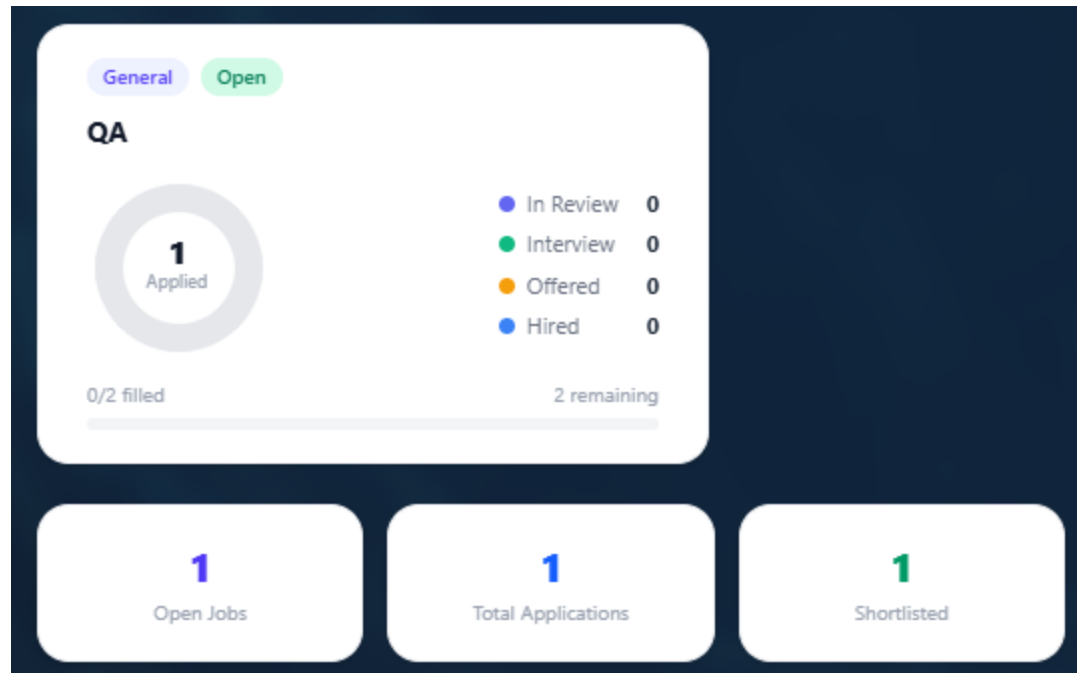

- All the “+ Add New” buttons have render issues and do not ask for complete info for their corresponding details.
- There is no option to delete the blood group option once added.

“Recruitment” Tab

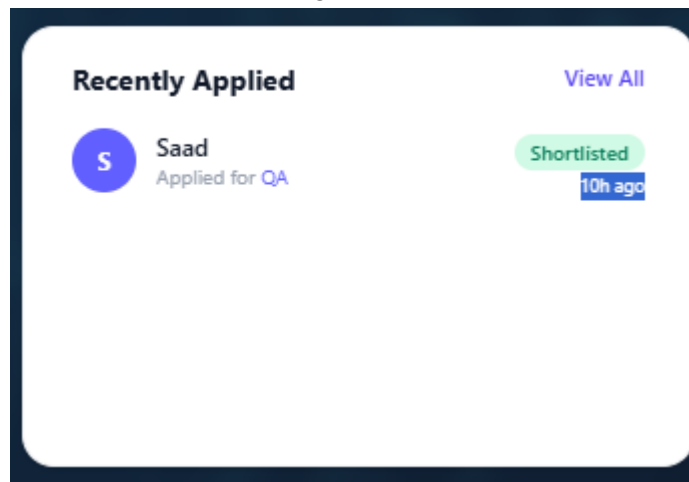

- All the cards have this weird arrow, remove it

- The “Schedule” only shows the calendar for days of the current month, ideally, it should show the current month fully, with forward and backward arrows to change the month to see all the interviews scheduled?
- The “View all” on the “Recently Applied” card is misleading as it just redirects to the “manage” tab in the Recruitment tab. (i.e. same as clicking the “manage” toggle at the top left handside)
- The Job offering suddenly disappears from the “dashboard” view after a candidate applies for it. But it is still visible in the “mannage” view. Needs explicit refresh of page to fix
- The pie chart does not show candidates that are shortlisted

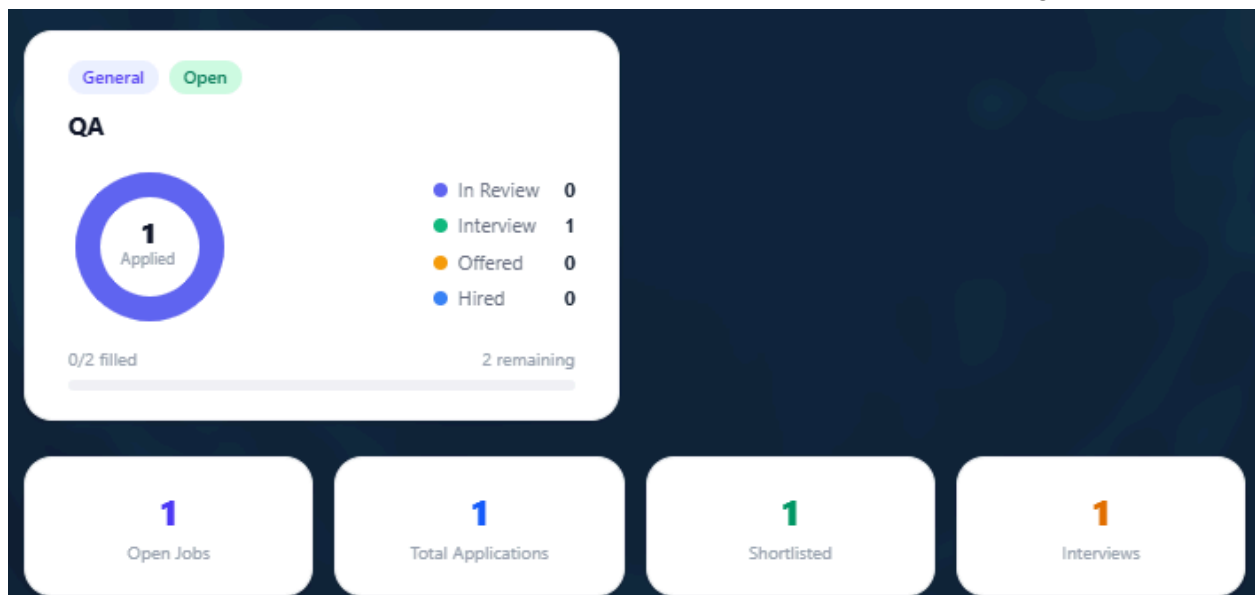

- The shortlisted date/time calculation is wrong

- The “add candidate”, “add interview” and “Send Offer” buttons, all should preferably display the input form as dialogue form instead of displaying the input form on top of the tables to ensure we do not need to scroll up a lot to see the form.
- When adding an interview,
 - we should not be able to select a date that has passed.
 - More options for the interview type is needed.
 - The name of the interviewer should ideally not be imputed in a text box, instead a drop down with all the HR employees (with some other ppl for specific questioning) should be shown.
- The interview schedules should be editable and deletable after creation.

- The pie chart does not update appropriately with application and interview status (the color should be green as per interview), also there is color inconsistency with the color attributed to each label in the pie chart and the cards at the bottom of page.

- There is no place to see the feedback on interview

Feedback saved

[+ Schedule Interview](#)

Interviews

CANDIDATE	JOB	DATE	TYPE	INTERVIEWER	STATUS	ACTIONS
Saad	QA	2026-05-14	Technical	Shezad	SCHEDULED	Complete Feedback

- Once an interview is completed, it should not be counted in the pie charts calculation on the dashboard.
- A single candidate can have multiple interviews scheduled which is fine i guess, but it should be handled carefully to avoid double counting in pie chart's calculation on the dashboard.
- A single candidate can have multiple Offers sent to him/her which should not be possible.
- Salary and for that matter any numerical text field should not be able to hold -ve no.
- A candidate that has accepted the job, should not have his/her previous application record and interview details modified. (which is not the case currently)

Suggestions

“Apply Leave” Tab

- The Apply leave form should be centered on the whole screen.
- “From date” calendar option on the Leave Application Form should have previous dates greyed out.
- A “TOTAL LEAVES” card should be included besides CASUAL LEAVE, MEDICAL LEAVE, EARNED LEAVE cards in the “Leave status” tab. (for consistency and removing awkwardness)

"Attendance" Tab

- Ability to sort attendance records by Asc/Des order of dates, working hrs, etc etc.
- Late is currently counted in hrs:min, it would also be helpful if its count was shown.

“Profile” Tab

- Some details’ should be editable by the employee himself

“HRMS” Tab

Employees tab

- The Action field/column in the Employee Directory table is left aligned, make it centered.
- Search by first/last name separately and/or by using regex.

Attendance tab

- Search by first/last name separately and/or by using regex.

Locations tab

- What is the “point” field ? and Explanation on hover would make it more understandable or just rename it to smth else.
 - Also it would be very useful if all the data points could be plotted on the same map at the same time to track and visualize the path taken..

Setup tab

- An option to edit/delete designation and department entries/records in the “Organization” section.

“Recruitment” Tab

- In the “manage” toggled view, the “Add candidate” should ideally open a dialogue box/screen with all the fields as it is rather than making the application from appear spontaneously at the top to the “Applications Received” table

Tested for
